

Checkpoint 3 – Play Test Observation Notes

Introduction: During this playtest, our main goal was to gather information from our peers regarding the playability, environment interactions, mechanics, and general thoughts when playing the game. Our feedback was taken through both written and verbal communication when the play testers were playing our game. For this checkpoint, testers were mainly checking how our mechanics were developed and how they interacted with our player.

Negatives during play testing	Positives during play testing	How do we fix this?
Users gave feedback mainly regarding the lack of new mechanics that we have implemented in our game. This resulted in a lot of players finding our game not as fun to play as there was no intractability between our NPCS and our player yet. Once we connect these our game will be solid. Feedback: - The player has trouble dealing with 1 block gaps (can't get through) - Implement parallax scrolling vertically so that the player understand that they are moving up/down - Make it easier for the player to understand	Users gave feedback mainly regarding the individual components of our project and mentioned that they thought that individually they worked nicely, but combination was necessary. We also noticed that people like our level design and thought that it was interesting.	We plan on fixing our game by: - Implementing slight vertical parallax scrolling to account for the slight up and down movements that are present when traversing the buildings - Connect the weapons to attack the NPCS and implement NPC health and death - Implement level restarting automatically when a player dies/falls - Implement health for the player and NPCS to make a more interactable game -

where to go at the beginning. - When you fell off a building, the player wouldn't restart automatically, and you would have to click 1 again		
---	--	--

Takeaways: We weren't completed with all of the requirements of the checkpoint; however, our feedback was useful to fix some bugs in our games that we hadn't previously thought of. The main thing that we need to work on is the intractability with our mechanics and the player.
